

TRAINING FOR PROFESSIONALS IN AUGMENTED REALITY CONTENT MANAGEMENT AND CREATION

Augmented Reality is one of the central technologies driving the trend towards digitalization in manufacturing. Until now, missing experiences and the high effort in creation content for AR were major hurdles for bringing this technology into the industry.

Based on interviews with industrial experts, the consortium created a comprehensive workshop format covering both fundamentals of AR and bringing first hands-on experiences with simple AR instructions. Using the easy-to-use Augmented Reality Content Management System learners can quickly create their own AR instructions to foster their understanding of AR and to uncover new use-cases.

TIMING AND MILESTONES

- Interviews with industry experts – 03/2021
- Development of comprehensive workshop format and learning content – 06/2021
- First pilot workshops – 08/2021
- Feedback and review process 10/2021
- Second pilot workshops – 11/2021
- Learning nuggets for skills.move – 12/2021

MAIN PROJECT RESULTS

4 institutions

over **70** learners

over **20** created learning nuggets
