

RUBIC - HYBRID PRODUCTION SYSTEMS BASED ON SAFE HUMAN-ROBOT INTERACTIVE COOPERATION

PROJECT START

Total costs: 693K€
EIT Funding: 577K€

MS1 - End User Specifications and KPIs
February 2020

MS2 - Virtual layout and validation of HRC
March 2020

MS3 - HRI Interfaces and collaborative robot control
July 2020

MS4 - HRC station level integration platform
September 2020

MS5 - HRC cell validation
December 2020

CHALLENGE

- Automation and digital transformation of existing manufacturing processes
- Quality assessment operations require high repeatability, accuracy and precision

SOLUTION

- Implementation of a hybrid working cell to automate the quality testing actions of a part.
- Robot precision & repeatability are combined with human cognition capabilities

BENEFITS

- Improve working conditions for operators
- Avoid repeatable operations
- Minimize injuries and stress
- Improve quality assessment operations

MAIN PROJECT RESULTS

INCREASE
AUTOMATION AND
DIGITAL
TRANSFORMATION

IMPROVE QUALITY
ASSESSMENT
OPERATIONS

IMPROVE WORKING
CONDITIONS FOR OPERATORS
BY AUTOMATING PART OF
THEIR ACTIVITIES

*“ thanks to EIT we were able to...
provide a promising quality
assessment solution to the industry,”*

DR. SOTIRIS MAKRIS
Senior Project manager
Head of Robots, Automation and Virtual Reality
in Manufacturing group at Laboratory for
Manufacturing Systems & Automation (LMS),
Mechanical and Aeronautics Engineering,
University of Patras
